Emily, I do not have the Human Health report. I know you are concerned about not having the finalized report. I have made you aware of all the potential issues that may be in the report. The water trigger of 4 ppb is not an issue and will be part of the Proposed Order. The other terms of the order may be the impervious gloves the APF of 1,000 and the Haz com for skin sensitization, reproductive toxicity and specific organ Toxicity. As I mentioned below I did send you information to be reviewed but I do not have any updates at this time.

Hi Jeff,

Hope you are well.

I wanted to reach out to you to understand if the Agency has any questions with our recent submission and / or what progress has been accomplished with our submission. Look forward to hearing from you.

Best regards,

Emily Clark | Eastman Chemical Company

CAUTION: External Email

Emily,

I just sent the new information submitted into CDX today to the engineers to review to see if helps mitigate worker exposure. This may help change the APF requirement (currently and APF od 1,000). If the water releases do change we will calculate new releases, However, the Chronic COC of 8 ppb will most likely be a condition in the Consent Order with the impervious gloves, and Haz com.

I do not have a timeline for getting the Human Health report. The new information may prolong it being completed so they can incorporate any of the new information into the Final report.

Thanks

Hi Jeff,

I wanted to make sure you were aware that Eastman made a submission through CDX today for the above indicated PMN, relative to the ecotox report you shared with us. We continue to be extremely concerned regarding the length of time that has passed since our PMN submission was made in September 2020 and as we sit in July 2021 without having seen a Human Health report yet. Can you please update us on the prioritization of that work?

Please do let me know the Agency reaction to our current submission for the PMN.

Best regards,

Emily Clark | Eastman Chemical Company
